БТ“ .Reducing the side effects of
imaging equipment. Millions of
diagnostic images are produced
every year for the purpose of disease
diagnosis and treatment planning.
While diagnostic radiological
imaging systems have become
increasingly sophisticated, their
widespread use has been limited by

concerns about radiation effects on patients and their progeny. Recent findings demonstrate radiation-induced effects on human life span and fertility, especially the adverse effects on the offspring of children whose mothers were exposed to x-rays during pregnancy. Increasing use of computerized tomography, magnetic resonance imaging, angiography, and in vitro fertilization have further increased concern about the cumulative risks of diagnostic imaging to unborn children, though to date there is not yet a credible link between the

radiologic exposure and any specific developmental disorders in children. Current knowledge of the effects of ionizing radiation on human reproduction is reviewed here and recommendations regarding radiation dose limits for diagnostic studies are proposed. Dozens of European countries are monitoring Turkey's pre-emptive military moves on the Syrian border, and have increased their security presence on both sides of the border. A security source told Sputnik that the Turkish army "is preparing for a military operation, possibly in a short term, if

it determines that Syrian forces are planning to attack Turkish territory." The incursion was in response to an apparent chemical attack by the Syrian military in Idlib province that is being supported by the Islamic State (ISIS), the Kurdish YPG militia and others. "A report says that the West knows there are no chemical weapons in Syria.
