Subscribe Updates, bug fixes, new features, web app security and a lot more for the clients and the team. Frequently asked questions Our customers are always asking us about our new features and bug fixes. We are happy to announce that we have decided to open up our CodePlex project, so that our developers will have more time to work on improving the product in general. If you haven't heard of our CodePlex site before, it is basically an open source product. The client portal (basically your site) is for our customers while the developer portal is where our internal team members work on. The code is open and everybody can access it. Unfortunately, the Acunetix CodePlex site is not yet fully in order yet, but we will work on it over the next weeks. In the meantime, please use the download link below and feel free to download and try out the new features. If you have any problems with the application after the installation, please send us an email to help@acunetix.com and we will investigate and reply back to you within 24 hours. If you want to submit a new feature request, please send an email to newfeature@acunetix.com with the title "Feature request" and the list of features you want to see added to the product. Please include as many details as possible (for example, sample data or a sample application). You can read more about Acunetix new features and the roadmap here: Here are some screen shots of some of the new features, you can also download it from the download section below: Since the new Acunetix Web Vulnerability Scanner version 2.0, the product also contains the ability to scan the target application for all potential risk assessment issues, which is called the Enhanced Web Application Risk Assessment (EWAR) in addition to the Web Vulnerability Scanner that is scanning the application for vulnerabilities. With the latest version, we are introducing an additional feature that is to help in the process of prioritizing risks. The feature is called the Risk Priority Assessment (RPA) and it is to help the user prioritize the potential risks found in the application. We have already added the functionality in some of our professional client solutions. Please check them out here: 82157476af
